

HUM-B[™] Edge Grinder

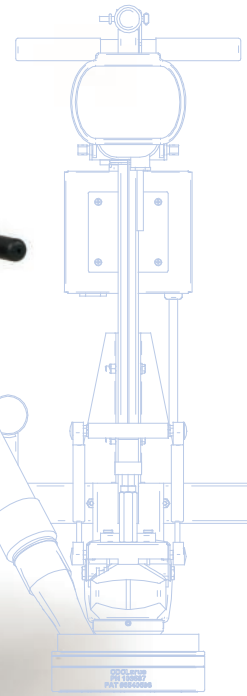

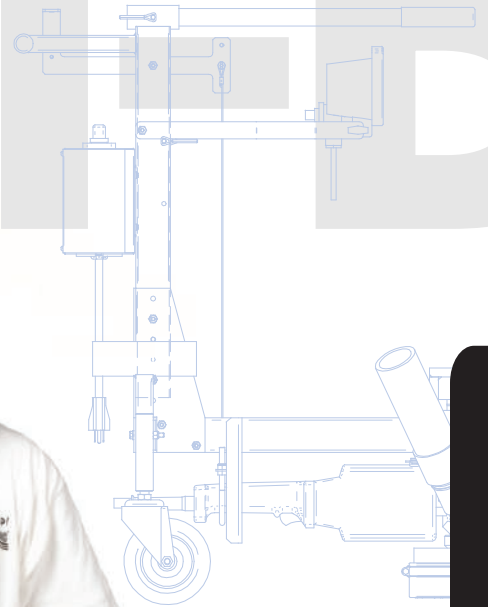

Get up off your hands and knee's and do edge prep work standing up with the ergonomically designed Hum-B[™] Edger. The Hum-B edge grinder is ideal for grinding or polishing concrete, terrazzo, or stone surfaces, or removing adhesives, paint or epoxy floor coatings. No matter the application the ergonomically designed Hum-B edge grinder will increase productivity, reduce jobsite injuries and cover more square feet in less time with less effort.

Hum-B Edge Grinder is the only surface grinder equipped with our patented Dust Grabber dust shroud. Made of steel and fitted with a replaceable polymer seal, the Dust Grabber shroud creates a vortex of moving air under and all around the circumference of the shroud, allowing the grinder to float effortlessly across the floor with no suction lock. The polymer seals take less than 5 minutes to replace and does not require the shroud or the turbo cup wheel to be removed. The Dust Grabber is the only shroud with a lifetime replacement warranty.

- Eliminates fatigue and gain better control by standing in an upright position to grind.
- Equipped with the patented Dust Grabber™ dust shroud. The dust grabber shroud captures 99% of dust with no suction lock to slow you down and comes with a lifetime replacement warranty on all metal parts.
- Available in a single speed (6000 RPM) grinder or a variable speed (3000 RPM) grinder for polishing.
- Operates on a standard 110 Volt 20 amp outlet and is equipped with gas filled shocks for level grinding, 250 watt halogen light, 12 segment turbo cup grinding wheel and two five inch non-marking swivel caster wheels.
